

MCS has significant experience in the specification, design, manufacture, installation, commissioning and calibration of field instrumentation systems spanning most industry sectors. Our expertise covers all types of instrumentation from simple flow and level through to highly complex analytical instruments and our expertise includes Hazardous areas. From simple single instruments to very large and complex analytical instrument backboards, MCS has the

experience and facilities to deliver these systems with minimum delay. MCS has recently been contracted to deliver a £1m project for Welsh Water's new Cwellyn Clean Water Treatment located in the Snowdonia National Park. The project has encompassed full design, Motor Control Centres, LV Distribution, System Integration and Electrical Installation.

As part of this project, our Barnsley facility have designed and manufactured all the works instrument backboards, an example of one in build is illustrated. MCS can provide 'build only' services based on clients' detailed drawings and Bills of Materials right through to a 'full turnkey' service covering detailed site surveys, specification, design, build, installation, commissioning and calibration.
