

MCS has been in business for over 34 years and has been historically recognised as a quality System Integrator providing Design, Control Panels and Electrical Installation.

Over the last 5 years, more and more clients have engaged MCS for what could be considered “non-core” activities and through this the MCS Directors seized an innovative opportunity to widen its services to include; Project Management, CDM, Civils, Demolition, Mechanical, Piping, HVAC and Turnkey small works.

MCS has recognised, along with its clients, the distinct advantage of this approach when it comes to small works. Whilst MCS has the breadth and depth of experience to cover all aspects of the project, this does not come with the significant costs and overheads typically associated with a larger main contractor. By using MCS, clients have realised significant cost savings without any impact on quality and delivery.

MCS provides a one stop shop and are well versed in reducing the client's risk with MCS being solely accountable for the delivery of multi-disciplinary projects by skilfully managing all interfaces with its sub contractors.

MCS is proactively involved in many schemes at feasibility stage in order to develop and propose innovative solutions, in order to reduce costs for Civils, Mechanical and overall delivery time.

MCS has significant experience outside the Water Sector. This includes Power, Nuclear, Food/FMCG, Process, Defence, Logistics, Automotive and Aerospace. Through this, we are able to propose and suggest innovative solutions and working practices from these sectors to further improve the delivery of projects for clients within the Water Sector.
